Claim Rejections - 35 USC § 112

Claims 1-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, “ particularly” renders the claim vague and “ sheet-like” is ambiguous. Claim 11 is not understood and is addressed as best understood.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3,8,11-13,16,17 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Weiblen.

Weiblen discloses a shade in an airtight chamber between transparent panes with motor driven rollers as recited. The edges of the shade are held in “ profiles” that seal light at the edges. The shade has portions 28a-d of varying light reflective capabilities.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3634

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Weiblen.

It is inherent that the seal between the motor 76 and the shade chamber is airtight so as to keep the chamber airtight.

Claims 1,2,4-6,8-12,15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pierson et al in view of Kunz.

Pierson et al discloses two shades having metal coatings of various densities that are motor driven and are further activated by heat and light sensors which activate the motors. What is not shown are the location of the shade within a sealed window and a tube motor mounted in the roller. However, Kunz discloses each of these features and it would have been obvious to modify Pierson et al so as to achieve the advantages of these features.

Allowable Subject Matter

Claim 14 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

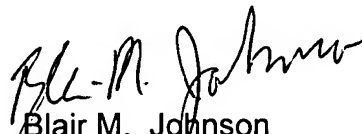

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Blair M. Johnson whose telephone number is (571) 272-6830. The examiner can normally be reached on Mon.-Fri., 6:30-3:00.
